ELEVATOR & ESCALATOR

Comprehensive Album

One stop solution for
urban vertical transportation

MILANTO

GROUP

Flexible Production
Promote Capacity Growth

The company has introduced a flexible production line that integrates functions such as automatic feeding, punching and cutting, bending, welding, and automatic stacking. Compared with traditional production methods, it saves time and manpower. Key equipment for elevator production, such as automatic welding robots, painting production lines, laser cutting CNC punching machines, etc., have achieved highly automated control of production, ensuring high-quality, flexible products, fast service, and timely delivery.

AAutomated production

High product accuracy

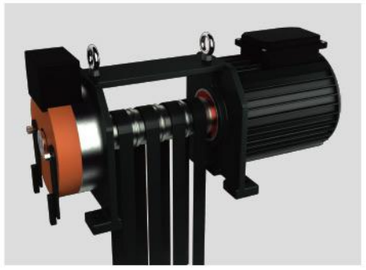
Quality assurance

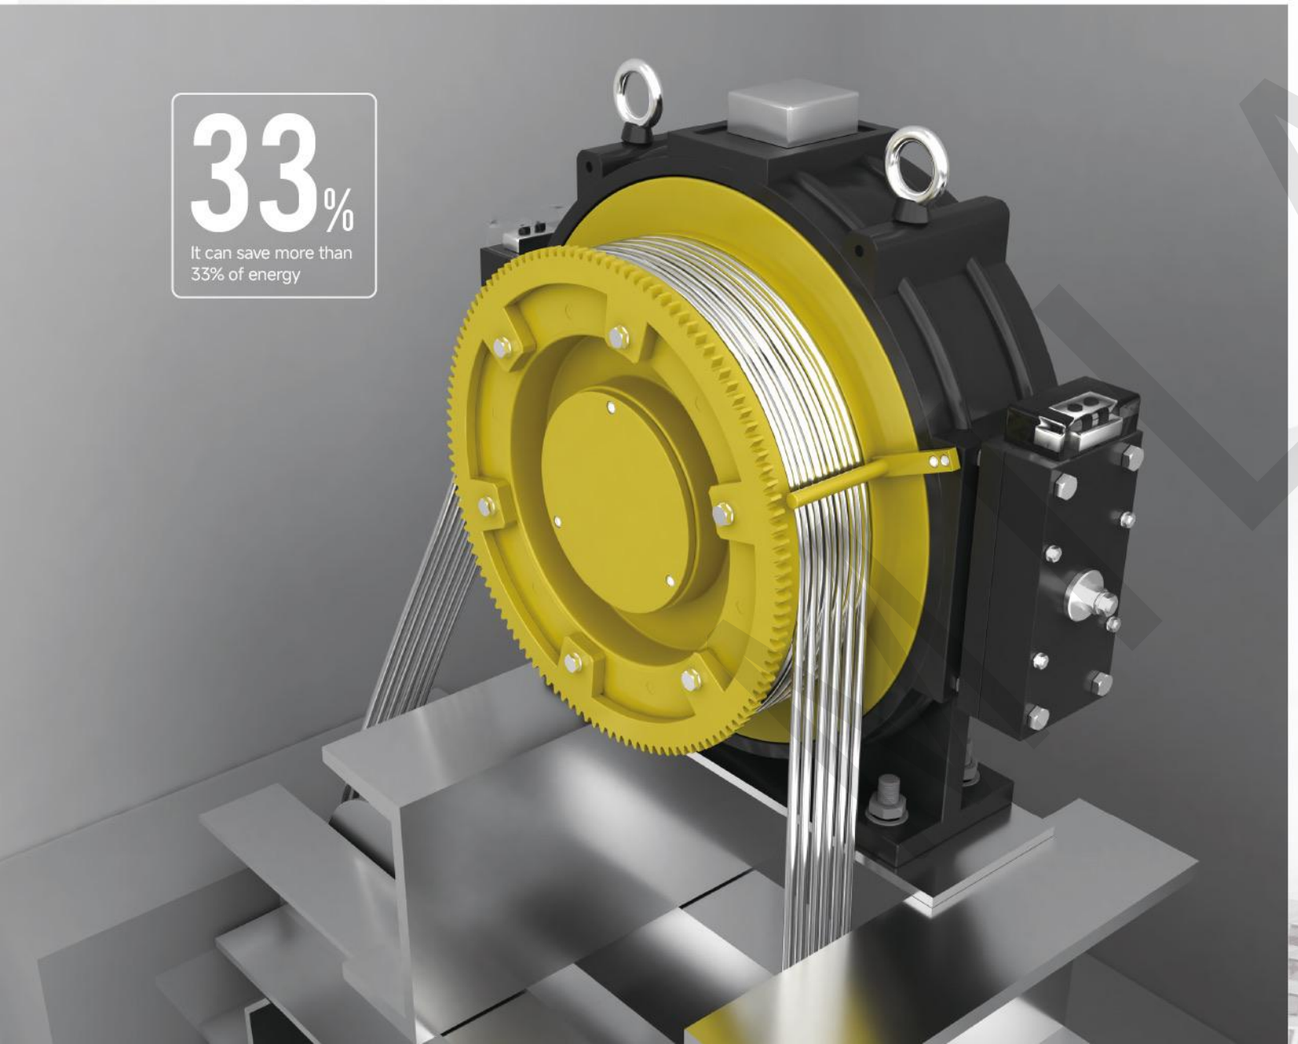
Intimate service

Drive System And Load-Bearing Capacity

Permanent magnet synchronous gearless traction machine

Rare earth materials are selected, and coaxial transmission technology, digital frequency conversion technology and group computer combined control technology are fully integrated. The operating cost is low, energy loss is low, and energy can be saved by more than 33% compared with general traditional technologies.





Product load parameter table

Product name	Load capacity (Kg)	Speed (m/s)
Machine-room passenger elevators	400-2000	1.0-8.0
Machine-roomless passenger elevators	400-2000	1.0-8.0
Circular sightseeing elevators	250-1600	0.3-1.0
Villa elevators	250-400	0.3-1.0
Medical elevators	400-2000	1.0-8.0
Machine-room freight elevators	2000-20000	0.25-1.0
Machine-roomless freight elevators	2000-20000	0.25-1.0

Elevator Solution Introduction To Control Cabinet And Host

Fourth-generation cabinet

The fourth-generation elevator control cabinet redefines the elevator riding experience with a disruptive design - reducing the floor space by 30%. With a slim body, it enables elevators to create more value possibilities for commercial complexes and high-end residences.

The noise is as low as below 45 decibels. It adopts aerospace-grade noise reduction technology and a fully enclosed noise reduction structure, eliminating the mechanical operation sound without a trace

1. Advanced technology
2. Space saving
3. Low noise
4. Safe and reliable

Hospital Elevator

Make you feel a wonderful world of humanity

The FUJIPN Medical Elevator series fully considers the particularity of the hospital environment and adopts the world's cutting-edge modular computer control technology to form a highly integrated VVVF serial communication control system, which ensures smooth braking and operation of the elevator, making patients feel comfortable.

The design of multiple security features effectively reduces the probability of accidents and allows patients with limited mobility to enter and exit safely.

Detailed sectional diagram

Freight Elevator

FUJIPN freight elevators integrate advanced technology into every detail based on the transportation needs of goods, providing customers with a more convenient building freight experience.

Super strong load-bearing design

The high-strength car frame and specially reinforced car chassis are perfectly combined, sturdy and reliable, with stronger load-bearing capacity, increasing the service life of the car.

Ultra large spatial structure

The reasonable optimization of the elevator car structure results in a larger and brighter space, allowing large volume goods to freely enter and exit, making transportation more efficient and convenient.

Car Elevator

Creating a new height for vertical transportation of automobiles

FUJIPN Automobile Elevator functions similarly to a heavy-duty freight elevator, allowing cars to freely move up and down in vertical space. The design fully considers the large space and load required for the complete assembly and unloading of automotive products, and adopts advanced cargo elevator technology in the industry. It has reliable performance, flexible parking, and easy use, and is suitable for large shopping malls, logistics centers, car 4S stores, and other places.

Dual control box button

There are two control box buttons inside the elevator car, allowing the driver to operate the elevator without leaving the car

Specialized display system

A specialized circuit control and display system, which is convenient for both the driver inside the car and the driver waiting outside the car.

Safety guidance device

The ground inside the elevator car is equipped with safety guidance devices to ensure the safety of the elevator and the car.

Front and rear doors

Front and rear door opening: The elevator car is equipped with front and rear doors, which makes it more convenient for cars to enter and exit the car and ensure safety.

Dumb Waiter

FUJIPN miscellaneous elevators are controlled by industrial computers (PLC) or microcomputers, with a complete range of specifications, novel structures, and excellent manufacturing. They are safe, reliable, operate smoothly, and are easy to operate. The car and hall doors are made of high-quality stainless steel plates with hairline patterns, which are luxurious and beautiful. They are widely used in hotels, restaurants, and other places, and are well received by users.

Complete specifications

The load range is 50KG-500KG, with optional specifications such as window sill type for direct cargo entry and exit and floor type for convenient cargo trolley entry and exit. It is suitable for different occasions and can also be customized according to customer needs.

Standard type

Floor standing type
(vertically divided)

Target Layer
Group Control Series

The destination floor system (destination floor reservation registration system) is an improvement on the intelligent group control system of elevators, further enhancing the allocation of group control elevators. This system is equipped with a destination floor selector in the waiting hall, allowing passengers to complete the floor selection operation in the waiting hall without having to choose floors again in the car. The system intelligently processes the demand data of passengers on the destination floor, guiding them to wait at the corresponding elevator, thereby achieving efficient diversion transportation, shortening the waiting time for elevators and improving the operational efficiency of elevators.

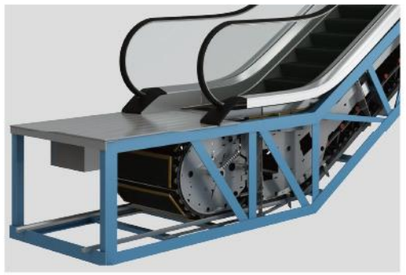
Escalator

Electric escalators are also known as escalators, or automatic pedestrian elevators, escalators, or escalators. Composed of a ladder (a modified plate conveyor) and handrails on both sides (a modified belt conveyor), it is a transportation tool that transports pedestrians by means of a conveyor belt.

High performance asynchronous host

Transmitting large torque in a small space can ensure high transmission efficiency even at low speeds. The low friction coefficient makes it easy to establish a dynamic pressure oil film, resulting in high transmission efficiency and energy savings.

The escalator traction machine adopts an internationally renowned reduction mechanism with extremely high wear resistance and power transmission efficiency. The reliable and easily adjustable brake shoe type braking device is placed between the motor and the reduction gearbox, ensuring good automatic performance and safe pulling distance, smooth operation, and extremely low noise.



Moving Walk

Automated pedestrian walkways are widely used in public transportation venues such as large supermarkets, airports, exhibition centers, and transportation transfer stations. They not only meet the transportation needs of high foot traffic, but also facilitate long-distance walking and the transportation of luggage carts, baby strollers, shopping carts, and disabled vehicles. This makes people feel like they are walking on flat ground, especially when shopping, greatly facilitating their travel and shopping.

High performance asynchronous host

The fish belly beam short pedal greatly reduces the spatial span and saves valuable building space for customers.

Energy saving operation mode

Energy saving can be achieved through variable frequency control or self starting methods.
